Hadoop Map/Reduce / MAPREDUCE-3692

yarn-resourcemanager out and log files can get big

Details

Type:	⬆ Improvement	Status:	**CLOSED**
Priority:	⛔ Blocker	Resolution:	Fixed
Affects Version/s:	None	Fix Version/s:	0.23.1
Component/s:	mrv2		
Labels:	None		
Hadoop Flags:	Reviewed		

Description

I'm seeing 8gb resourcemanager out files and big log files, seeing lots of repeated logs (eg every rpc call or event) looks like we're being too verbose in a couple of places.

Tom/Eli,

This patch changes the log-level for all transitions in MR AM and resource manager which to me is a serious concern particularly in the context of debugging. Granted we do log a little too much, but the correct fix should be to selectively downgrade so that important transitions like node/container/task failures are not missed. After the current patch, I think debugging on cluster becomes very painful.

What I think we should do is to remove the logging from all handle methods, and selectively log in the individual transitions that we think are important.

Either I can reopen this ticket or you can revert this patch. Sorry for coming in late.

∨ ◉ Arun Murthy added a comment - 19/Jan/12 23:55

Uh, I just ran into this. I see no logs at all...

Agree with Vinod, we can't have zero logs - makes it impossible to get an operational view.

Eli - I had to undo this patch to develop, kinda urgent. Can we start afresh? Thanks.

That's why we have the debug log level right? Devs can toggle it if you want to see all AM transitions but doesn't inflict huge logs on normal users.

The Sytem.out in the rpc code definitely needs to go so let's not revert that.

+1 to selectively logging the transitions relating to failures. The logging in all handle methods is probably worth keeping at the debug level.
